

Dark Sky

Provides:

This API provides services for getting the weather at a location and date in time.

Key Provisioning:

Pain factor (*0=ezipz...5=nightmare*): 

- To get a key, you must
 - Sign up with an email
 - Click a link that is sent via that email

Quotas:

- 1,000 Calls Per Day for Free + \$0.0001 for each additional call (no credit card required on signup)

The Good:

- Provides a *lot* of data
 - Like, we're talking forecasting by the minute, hour, and day in 43 different languages (including Pig Latin)
- Gives access to forecasts as well as historical data
- Returns human-readable summary (key "summary") as well as machine-parsable outputs (key "icon")
- Provides weather alerts for major warnings
- They have a very user-respecting [privacy policy](#)

The Bad:

- The 1000-free-call limit may be small for professional use, but should be sufficient for personal use
- The sheer depth of the API might be a bit off-putting

The Ugly:

- In order to use the API you must [give attribution to Dark Sky](#)
