Collected Knowledge & Wisdom on

Holiday

Provides:

This API provides a list of holiday data.

Key Provisioning: **Pain factor** (*0=ezpz...5=nightmare*): ` 1 `

- Keys are only distributed to users, meaning that one must create an account in order to get a key.
- To get the URL, you must include three required parameters: key, country, and year.
- The URL contains optional parameters that allow the user to look for more specific holiday data

Quotas:

- Free users are limited to historical holiday data.

The Good:

- Data is informing and easy to handle.
- If there is an error in the program, the status codes have been defined by the domain.
- Useful additional parameters to filter results

The Bad:

- Doesn't allow free users to get current and/or future holiday data.
- More holidays included for some countries than others

The Ugly:

- Data contains redundant parts: "date" and "observed date" info are equivalent
